Table OVA: Overview of risk management

The Group is based on the consolidation of Public Bank (Hong Kong) Limited (the “Bank”) and Public Finance Limited (“Public Finance”). The Group’s risk management is underpinned by the Group’s risk appetite and is subject to the respective Boards’ oversight through the Risk Management Committees (“RMCs”) of the Bank and Public Finance, which are Board Committees overseeing the establishment of company-wide risk management framework, policies and processes. To identify and manage key risks effectively, the Group adopts a risk management framework under which key components of the Group’s business model such as business activities conducted to ensure the sustainability of profitability, core supporting operations to support business activities and the delivery of risk based reports, loan product segments and features, debt securities portfolio mix, geographical segments, pricing and loan recovery strategies, and concentration of customer groups are considered in ascertaining its overall risk profile. The Group reviews its risk profile through regular assessments of both qualitative and quantitative risk factors to monitor prevailing risk levels against the applicable risk appetites regularly (at least annually) approved by the Board. The Group shall review and revise its business model, key business strategies and risk tolerance levels as appropriate pursuant to assessment results of risk profile which may vary from time to time.

RMCs are responsible to assist the Board in discharging the Board’s roles and responsibilities in managing risk and compliance issues including at least the Group’s infrastructures, resources, capital levels and risk controls to manage the risk-taking activities in meeting the risk appetite thresholds and regulatory guidelines. Periodic reports provided by heads of Risk Management Departments (“RMDs”) on the state of the Group’s risk culture, risk exposures and risk management activities are reviewed by the RMCs regularly. The other key dedicated risk committees (i.e. Assets and Liabilities Management Committees (“ALCOs”), Credit Risk Management Committee (“CRMC”), Credit Committees, Operational Risk Management Committees (“ORMCs”)) of the Group are established to ensure that the day-to-day management of the Group’s activities are consistent with the risk appetite, frameworks and policies approved by the Board or delegated authorities. The ALCOs are responsible to oversee the development and implementation of policies, processes, procedures and limits for the asset and liability management and ensure key risk issues related to interest rate risk and market risk management, balance sheet structure, capital structure and planning, and liquidity and funding risk management are identified and managed within the risk appetite. The CRMC and Credit Committees are responsible to assist RMC to establish the framework for identifying, measuring, monitoring and controlling credit risk of existing and new products; review credit risk management policies and credit risk tolerance limits (e.g. credit concentration limits of customer groups and industry sectors) as necessary; evaluate and assess the adequacy of strategies to manage the overall credit risk associated with the Group’s activities and ensure that the business units implement credit strategy and policies of the Group; monitor exceptional credit approvals within tolerable limits; regularly monitor and assess the asset quality, credit risk portfolio composition and risk-return trade-off of credit products; and oversee loan recovery process. The ORMCs are responsible to ensure the effective implementation of the

Public Bank (Hong Kong) Limited

operational risk management framework; oversee the development of operational risk management policies, guidelines, processes, procedures and limits to ensure operational risk is identified and managed within the Group's risk appetite; and evaluate and assess the adequacy of controls to manage operational risk for all material products, activities, processes and systems taking into consideration the changes in the operating environment. Through the execution of operations and management information system reports of the aforesaid dedicated risk committees and with the coordination of RMDs, RMCs regularly review the Group's risk management framework and ensures that all important risk-related measures are implemented according to established policies with appropriate resources. RMCs also ensure that the Group's risk appetite is reflected in key policies and procedures for the execution by business functions.

The Bank Culture Committee ("BCC") is also established to assist the Board to communicate, cascade and enforce the risk culture within the Group; develop and adopt a holistic and effective framework for fostering a sound culture; formulate a regular process, with the assistance of relevant committees and departments, to review the effectiveness of the overall culture enhancement initiatives pursued by the Group; approve, review and assess the adequacy of any relevant statement which sets out the Group's culture and behavioural standards annually; and ensure the above-mentioned statement is translated into policies and procedures (including training) that are relevant to the day-to-day work of different levels of staff. Dedicated heads of key departments are to assist the BCC to set out in the code of conduct, which is subject to regular review, the culture related behavioural expectation of staff in carrying out their day-to-day responsibilities, build up an effective, continual and regular communication channel to share examples/cases regarding misconduct, improper behaviours and disciplines with the staff and promote an open exchange of view in relation to culture and behavioural standards, design and put in place a clear ownership structure for the core risks and culture reform initiative, ensure that incentive systems (including staff, performance management, remuneration and promotion systems) should not only reward good business performance but also take into consideration adherence (and non-adherence) to the Group's culture and behavioural standards, produce and analyze a dashboard of indicators for assessing the culture of the Group and to help gauge changes over time, set up and review regularly the conflicts of interest policy to ensure that the policy aligns with culture objectives, and recommend the revisions on the policy, if any, to the BCC.

Senior Management is responsible for implementing the business and risk strategies approved by the Board, and the risk management systems, processes and controls for managing both the financial and nonfinancial risks to which the Group is exposed. Senior Management is also responsible for cultivating the risk culture promoted by the Board, and ensuring that the risk appetite is appropriately translated into risk limits for business lines and legal entities and that those limits are consistent with the Group's overall risk appetite, even under stressed conditions. The culture of risk management is well-integrated throughout the Group and embedded into the respective business practices to enable employees to take into account risks and its

impact on the Group in the respective business decision-making. An overview of the magnitude of the risks affecting the Group must be monitored to ensure that the risk-taking activities remain consistent with the approved risk appetite and are periodically reported to the respective risk committees and Senior Management. The key factors to embed risk management into the culture and business operation of the Group are corporate governance; organizational structure with clearly defined roles and responsibilities; effective communication; commitment to compliance with laws, regulations and internal controls; integrity in fiduciary responsibilities; clear policies, procedures and guidelines; and continuous training. The risk management framework of the Group is developed to set out the roles and responsibilities of the respective parties involved in the company-wide risk management; and to establish a risk management process and internal controls that will enable the identification, measurement, continuous monitoring and reporting of all relevant and material risks, including new and emerging risks.

The Group has adopted a “Three Lines of Defence” risk management structure to ensure that roles within the Group are clearly defined in regard to risk management. The first line of defence is provided by the business functions and supporting functions where risks are taken, and they are responsible for day-to-day identification, assessment, management and reporting of key risks (particularly credit risk, operational risk and compliance risk) within their products, activities, processes and systems in the course of conducting business activities; ensuring proper identification, assessment, management and reporting of relevant risk exposures on an ongoing basis and any breaches of risk limits and material risk exposures are promptly reported to the heads of RMDs and the Senior Management; executing risk mitigation strategies and processes, and ensuring that internal controls are consistent with the risk policies and risk appetite approved by the Board or delegated authorities. The second line of defence is Risk Management Function (“RMF”) and Compliance Function. The RMF is performed by RMDs and dedicated heads of departments, and is responsible for identifying, measuring, monitoring, controlling and reporting the Group’s overall risk exposures at company-wide and group-wide, portfolio and business line levels to Senior Management, RMCs and the Boards, encompassing risks independently from the first-line of defence. Compliance Function is performed by Compliance Department and dedicated officers, and is responsible for coordinating the identification and assessment of compliance risk at the group-wide level, independently monitoring the compliance and ensuring testing of compliance controls are carried out consistently across the Group. Internal Audit Function supports the Audit Committee to carry out its roles and responsibilities. Being the third-line of defence, Internal Audit Function is performed by Internal Audit Department, and is responsible for providing an independent assessment of the adequacy and reliability of the risk management processes and system of internal controls and compliance with approved risk policies and regulatory requirements. The head of Internal Audit Department reports directly to the Audit Committee.

Public Bank (Hong Kong) Limited

Management information systems support risk management processes to facilitate the timely and reliable reporting of risks and enable the identification, measurement, continuous monitoring and reporting of all relevant and material risks of the Group. The risk management processes shall capture both quantitative and qualitative elements of risks. The key risk areas are documented in risk management related policies and comprise credit risk, credit concentration risk, liquidity risk, interest rate risk, market risk, operational risk, reputation risk, legal risk and strategic risk. The sophistication of the risk management processes takes into consideration the business growth, nature, scale and complexity of its activities and the risk of the operating environment. Information systems are in place to provide information of the size, quality and composition of exposures across risk types, material products and counterparties at all relevant levels.

Key risks are communicated across the Group and material risk management issues and the progress of the implementation of risk measures are reported to the Board/Board Committees and Senior Management in a timely manner so that suitable measures can be initiated at an early stage. Risk monitoring and reporting requirements are established across the Group including the development and the use of key risk indicators to provide early warnings and adverse risk developments. Risk monitoring and reporting is performed at business unit, portfolio level, company-wide and group-wide level. Any deficiencies and limitations in the risk estimate as well as any significant embedded assumptions are communicated/ escalated to the Board/Board Committees and Senior Management. Risk reporting draws on a range of risk analytical tools/ approaches and are subject to independent periodic review by the RMF and Internal Audit Function.

Policies, procedures and processes are in place to evaluate strategic position of the Group when developing appropriate strategies to achieve their strategic goals and objectives. They incorporate at least how environmental influences will affect the Group's business and its use of products or services, technology and delivery channels; analysis of strengths, weaknesses, opportunities and threats of the Group; possible alternative strategies that can be adopted by the Group having regard to corporate goals and objectives; risk tolerance and appetite; flexibility in allowing changes to deal with sudden environmental changes and crisis situations; whether strategies are financially and operationally feasible in capital management and capital related targets. Pursuant to stress-testing program of the Group, the RMF uses techniques such as sensitivity tests and scenario analyses on relevant assets/ portfolios and liabilities including at least loans and advances, debt securities portfolio, bank placements, investment properties and net open positions of financial instruments. The time horizon for regular stress-testing is in the range of 6 months to 3 years in general. Stress-testing exercises of the Group are conducted to identify possible events or stressed scenarios, measure their adverse impact on profitability and capital base or strength and assess the Group's ability to withstand such impact. Stressed scenarios and analyses are either qualitative or quantitative covering at least the downturn in domestic economy such as adverse changes to the unemployment rate, or gross domestic product growth, or composite price index; increase in hit rate of personal bankruptcy

Public Bank (Hong Kong) Limited

petitions and corporate wind-up orders leading to an increase in the Bank's bad debts; the decrease in prices of loan collaterals leading to the increase of provisioning level; and rating migrations of counterparties. Stress-testing results are provided by RMDs to Senior Management and relevant risk committees for their feedback and/or decision making such as changes in strategic planning, changes in risk appetite and business model, shift of strategic focus, changes in business initiatives and decisions, risk-mitigating strategies to be taken, and increase or decrease of internal resources devoted to a business or an operation. Pursuant to the Group's risk appetite, the Group is not engaged in complex derivative financial instrument transactions and has no securitization exposures. The continuing effectiveness of mitigants and hedges, if any, for key risks is also monitored regularly (by dedicated risk committees at least bi-monthly). In developing a mitigation strategy or providing risk response, consideration is given to the impact of the chosen mitigation strategy on other risks to ensure all potential risks are accounted for and to avoid giving rise to new unattended risks.

Supplementary information of risk governance structure and risk management issues can be referred to note 36 of the 2018 Annual Report.

Template OV1: Overview of RWA

The table below provided an overview of RWA as at 31 December 2018 and 30 September 2018 respectively and the related minimum capital requirements by risk type as at 31 December 2018. The Bank and its subsidiaries (the "Group") have adopted standardized approach for both credit risk and market risk. Regarding operational risk, the Bank and Public Finance Limited have adopted basic indicator approach and standardized approach respectively. During the fourth quarter of 2018, RWA increased by HK\$0.35 billion to HK\$28.18 billion. The increase of RWA was mainly due to an increase in credit risk for non-securitization exposures related to loans and advances.

		(a)	(b)	(c)
		RWA		Minimum capital requirements
		31 December 2018	30 September 2018	31 December 2018
		HK\$'000	HK\$'000	HK\$'000

Template LI2: Main sources of differences between regulatory exposure amounts and carrying values in financial statements

The following table shows the main sources of differences between the carrying values in financial statements and the exposure amounts used for the calculation of regulatory capital in respect of the assets and liabilities based on the scope of regulatory consolidation.

		31 December 2018				
		(a)	(b)	(c)	(d)	(e)
		Total	Items subject to:			
			credit risk framework	securitization framework	counterparty credit risk framework	market risk framework
		HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000
1	Asset carrying value amount under scope of regulatory consolidation (as per template LI1)	41,948,632	41,948,632	0	0	0
2	Liabilities carrying value amount under regulatory scope of consolidation (as per template LI1)	0	0	0	0	0
3	Total net amount under regulatory scope of consolidation	41,948,632	41,948,632	0	0	0
4	Off-balance sheet amounts	46,256	46,256	0	0	0
5	Differences due to consideration of provisions		10,719	0	0	0
6	Exposure amounts considered for regulatory purposes	42,005,607	42,005,607	0	0	0

Table LIA: Explanations of differences between accounting and regulatory exposure amounts

The basis of consolidation for regulatory purposes is different from that for accounting purposes. In accordance with the Banking (Capital) Rules, the computation of the consolidated total capital ratio and other regulatory capital ratios of the Group based on the consolidation of the Bank and Public Finance is only for purpose of regulatory reporting to the Hong Kong Monetary Authority (“HKMA”). The subsidiaries not included in the computation of the consolidated total capital ratio, other capital adequacy ratios and corresponding capital base, Tier 1 Capital, other capital related components and risk weighted amounts of the Group are Public Bank (Nominees) Limited, Public Credit Limited, Public Futures Limited, Public Pacific Securities Limited, Public Financial Securities Limited, Public Financial Limited, Public Securities Limited and Public Securities (Nominees) Limited.

The key drivers for the differences between accounting and regulatory exposure amounts differences are as follows:

- The carrying amounts reported in the financial statements are after deduction of collective and individual impairment allowances while the exposure amounts for regulatory purposes are before deducting such impairment allowances (except for exposures under Standardised Approach of credit risk from which individual impairment allowances made against the exposures are deducted);
- Counterparty credit risk exposures for regulatory purposes consist of both the current exposures and the potential exposures derived from applying credit conversion factors (CCFs) to the notional principal of foreign exchange contracts.

The Group measures its investment properties and derivative financial instruments at fair value using the fair value hierarchy described as follows:

Level 1: based on quoted prices (unadjusted) in active markets for identical assets or liabilities

Level 2: based on valuation techniques for which the lowest level input that is significant to the fair value measurement is observable, either directly or indirectly

Level 3: based on valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable

In order to ensure that the valuation estimates are prudent and reliable, fair value is measured under level 1 of the hierarchy (i.e. quoted market prices) as far as possible. Where fair value is determined using level 2 or level 3 of the hierarchy, model inputs or outputs are validated against secondary sources, when appropriate, and the valuation process is also handled by a control function independent from business lines.

Template PV1: Prudent valuation adjustments

The table below provides a breakdown of the constituent elements of valuation adjustment as at 31 December 2018. There was no valuation adjustments for all assets measured at fair value (marked to market or marked to model), including non-derivative and derivative instruments, during the year.

85	<i>Amount excluded from Tier 2 capital due to cap (excess over cap after redemptions and maturities)</i>	0	

Notes to the template:

	Description	Hong Kong basis HK\$'000	Basel III basis HK\$'000
9	Other intangible assets (net of associated deferred tax liabilities)	0	0
	<u>Explanation</u> As set out in paragraph 87 of the Basel III text issued by the Basel Committee (December 2010), mortgage servicing rights ("MSRs") may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to follow the accounting treatment of including MSRs as part of intangible assets reported in the AI's financial statements and to deduct MSRs in full from CET1 capital. Therefore, the amount to be deducted as reported in row 9 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 9 (i.e. the amount reported under the "Hong Kong basis") adjusted by reducing the amount of MSRs to be deducted to the extent not in excess of the 10% threshold set for MSRs and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.		
10	Deferred tax assets (net of associated deferred tax liabilities)	24,992	0
	<u>Explanation</u> As set out in paragraphs 69 and 87 of the Basel III text issued by the Basel Committee (December 2010), DTAs of the bank to be realized are to be deducted, whereas DTAs which relate to temporary differences may be given limited recognition in CET1 capital (and hence be excluded from deduction from CET1 capital up to the specified threshold). In Hong Kong, an AI is required to deduct all DTAs in full, irrespective of their origin, from CET1 capital. Therefore, the amount to be deducted as reported in row 10 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 10 (i.e. the amount reported under the "Hong Kong basis") adjusted by reducing the amount of DTAs to be deducted which relate to temporary differences to the extent not in excess of the 10% threshold set for DTAs arising from temporary differences and the aggregate 15% threshold set for MSRs, DTAs arising from temporary differences and significant investments in CET1 capital instruments issued by financial sector entities (excluding those that are loans, facilities or other credit exposures to connected companies) under Basel III.		
18	Insignificant capital investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	0	0
	<u>Explanation</u> For the purpose of determining the total amount of insignificant capital investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 18 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 18 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.		

	Description	Hong Kong basis HK\$'000	Basel III basis HK\$'000
19	Significant capital investments in CET1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	0	0
	<u>Explanation</u> For the purpose of determining the total amount of significant capital investments in CET1 capital instruments issued by financial sector entities, an AI is required to aggregate any amount of loans, facilities or other credit exposures provided by it to any of its connected companies, where the connected company is a financial sector entity, as if such loans, facilities or other credit exposures were direct holdings, indirect holdings or synthetic holdings of the AI in the capital instruments of the financial sector entity, except where the AI demonstrates to the satisfaction of the MA that any such loan was made, any such facility was granted, or any such other credit exposure was incurred, in the ordinary course of the AI's business. Therefore, the amount to be deducted as reported in row 19 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 19 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.		
39	Insignificant capital investments in AT1 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	0	0
	<u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant capital investments in AT1 capital instruments may be smaller. Therefore, the amount to be deducted as reported in row 39 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 39 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.		
54	Insignificant capital investments in Tier 2 capital instruments issued by financial sector entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	0	0
	<u>Explanation</u> The effect of treating loans, facilities or other credit exposures to connected companies which are financial sector entities as CET1 capital instruments for the purpose of considering deductions to be made in calculating the capital base (see note re row 18 to the template above) will mean the headroom within the threshold available for the exemption from capital deduction of other insignificant capital investments in Tier 2 capital instruments may be smaller. Therefore, the amount to be deducted as reported in row 54 may be greater than that required under Basel III. The amount reported under the column "Basel III basis" in this box represents the amount reported in row 54 (i.e. the amount reported under the "Hong Kong basis") adjusted by excluding the aggregate amount of loans, facilities or other credit exposures to the AI's connected companies which were subject to deduction under the Hong Kong approach.		
Remarks: The amount of the 10% threshold mentioned above is calculated based on the amount of CET1 capital determined in accordance with the deduction methods set out in BCR Schedule 4F. The 15% threshold is referring to paragraph 88 of the Basel III text issued by the Basel Committee (December 2010) and has no effect to the Hong Kong regime.			

Template CC2: Reconciliation of regulatory capital to balance sheet

The table below provides a reconciliation between the scope of accounting consolidation and the scope of regulatory consolidation, and shows the link between the Group's balance sheet in published financial statements and the numbers that are used in the composition of regulatory capital disclosure template set out in Template CC1 (i.e. composition of regulatory capital). There was no significant change in the expanded balance sheet items over the reporting period.

	(a)	(b)	(c)
	Balance sheet as in published financial statements	Under regulatory scope of consolidation	Reference
	31 December 2018	31 December 2018	
	HK\$'000	HK\$'000	
Assets			
Cash and short term placements	3,953,045	3,946,916

Table CCA: Main features of regulatory capital instruments

The table below provides a description on the main features of the CET1, Additional Tier 1 and Tier 2 capital instruments, as applicable, that were included in the Group's regulatory capital as at 31 December 2018.

As at 31 December 2018		(a)
		Quantitative / qualitative information
1	Issuer	Public Bank (Hong Kong) Limited
2	Unique identifier (e.g. CUSIP, ISIN or Bloomberg identifier for private placement)	Not applicable
3	Governing law(s) of the instrument	Hong Kong Law
	<i>Regulatory treatment</i>	
4	Transitional Basel III rules ¹	Common Equity Tier 1
5	Post-transitional Basel III rules ²	Common Equity Tier 1
6	Eligible at solo / group / solo and group	Group and Solo
7	Instrument type (types to be specified by each jurisdiction)	Ordinary Shares
8	Amount recognised in regulatory capital (currency in millions, as of most recent reporting date)	HKD2,854
9	Par value of instrument	Not applicable
10	Accounting classification	Shareholders' Equity
11	Original date of issuance	Various
12	Perpetual or dated	Perpetual
13	Original maturity date	No Maturity
14	Issuer call subject to prior supervisory approval	Not applicable
15	Optional call date, contingent call dates and redemption amount	Not applicable
16	Subsequent call dates, if applicable	Not applicable
	<i>Coupons / dividends</i>	
17	Fixed or floating dividend / coupon	Floating Dividend
18	Coupon rate and any related index	Not applicable
19	Existence of a dividend stopper	No
20	Fully discretionary, partially discretionary or mandatory	Fully Discretionary
21	Existence of step-up or other incentive to redeem	No

¹ Regulatory treatment of capital instruments subject to transitional arrangements provided for in Schedule 4H to the BCR.

² Regulatory treatment of capital instruments not subject to transitional arrangements provided for in Schedule 4H to the BCR.

Public Bank (Hong Kong) Limited

As at 31 December 2018

		(a)
		Quantitative / qualitative information
22	Non-cumulative or cumulative	Non-cumulative
23	Convertible or non-convertible	Non-convertible
24	If convertible, conversion trigger(s)	Not applicable
25	If convertible, fully or partially	Not applicable
26	If convertible, conversion rate	Not applicable
27	If convertible, mandatory or optional conversion	Not applicable
28	If convertible, specify instrument type convertible into	Not applicable
29	If convertible, specify issuer of instrument it converts into	Not applicable
30	Write-down feature	No
31	If write-down, write-down trigger(s)	Not applicable
32	If write-down, full or partial	Not applicable
33	If write-down, permanent or temporary	Not applicable
34	If temporary write-down, description of write-up mechanism	Not applicable
35	Position in subordination hierarchy in liquidation (specify instrument type immediately senior to instrument in the insolvency creditor hierarchy of the legal entity concerned).	Not applicable
36	Non-compliant transitioned features	No
37	If yes, specify non-compliant features	Not applicable

Template CCyB1: Geographical distribution of credit exposures used in countercyclical capital buffer (“CCyB”)

The table below provides an overview of the geographical distribution of private sector credit exposures relevant for the calculation of the Group’s CCyB ratio as at 31 December 2018.

		(a)	(c)	(d)	(e)
	Geographical breakdown by Jurisdiction (J)	Applicable JCCyB ratio in effect (%)	RWA used in computation of CCyB ratio	AI-specific CCyB ratio (%)	CCyB amount
			HK\$'000		HK\$'000
1	Hong Kong SAR	1.875%	18,720,870		
2	Sum of above*		18,720,870		
3	Total (including those exposures in a jurisdiction with zero JCCyB ratio)		20,693,882	1.696%	351,016

* This represented the sum of RWAs for the private sector credit exposures in a jurisdiction with a non-zero JCCyB ratio.

Template LR1: Summary comparison of accounting assets against leverage ratio (“LR”) exposure measure

The table below provides the reconciliation of total assets in the published financial statements to the LR exposure measure as at 31 December 2018.

		(a)
	Item	Value under the LR framework HK\$'000
1	Total consolidated assets as per published financial statements	42,182,213
2	Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	49,291
3	Adjustment for fiduciary assets recognised on the balance sheet pursuant to the applicable accounting standard but excluded from the LR exposure measure	0
4	Adjustments for derivative contracts	10,104
5	Adjustment for SFTs (i.e. repos and similar secured lending)	0
6	Adjustment for off-balance sheet (“OBS”) items (i.e. conversion to credit equivalent amounts of OBS exposures)	347,163
6a	Adjustment for specific and collective provisions that are allowed to be excluded from exposure measure	(1,261)
7	Other adjustments	(468,276)
8	Leverage ratio exposure measure	42,119,234

Template LR2: Leverage ratio (“LR”)

The table below provides a detailed breakdown of the components of the LR denominator as at 31 December 2018 and 30 September 2018. The LR at 31 December 2018 as compared to position date of 30 September 2018 increased by 0.33%. The increase of LR was mainly due to a decrease of HK\$172.9 million in off-balance sheet exposures related to loans and advances.

		(a)	(b)
		HK\$'000	
		31 December 2018	30 September 2018
On-balance sheet exposures			
1	On-balance sheet exposures (excluding those arising from derivative contracts and SFTs, but including collateral)	42,369,208	42,401,426
2	Less: Asset amounts deducted in determining Tier 1 capital	(605,980)	(599,561)
3	Total on-balance sheet exposures (excluding derivative contracts and SFTs)	41,763,228	41,801,865
Exposures arising from derivative contracts			
4	Replacement cost associated with all derivative contracts (where applicable net of eligible cash variation margin and/or with bilateral netting)	2,541	2,769
5	Add-on amounts for PFE associated with all derivative contracts	7,563	5,549
6	Gross-up for derivatives collateral provided where deducted from the balance sheet assets pursuant to the applicable accounting framework	0	0
7	Less: Deductions of receivables assets for cash variation margin provided under derivative contracts	0	0
8	Less: Exempted CCP leg of client-cleared trade exposures	0	0
9	Adjusted effective notional amount of written credit derivative contracts	0	0
10	Less: Adjusted effective notional offsets and add-on deductions for written credit derivative contracts	0	0
11	Total exposures arising from derivative contracts	10,104	8,318

Table LIQA: Liquidity risk management

Liquidity risk is the risk that the Group cannot meet its current obligations. Major sources of liquidity risk of the Group are the early or unexpected withdrawals of deposits in cash outflow and the delay in cash inflow from loan repayments. To manage liquidity risk, the Boards of the Bank and Public Finance has established a liquidity risk management framework which incorporates liquidity risk tolerance, management oversight on liquidity risk, liquidity risk and funding strategy, risk related metrics and tools for liquidity risk management, internal liquidity risk pricing, and the manner of reporting significant matters. The major objectives of liquidity risk management framework are to (i) specify the roles and responsibilities of relevant parties on liquidity risk management, (ii) identify, measure and control liquidity risk exposures with proper implementation of funding strategies, (iii) effectively report significant risk related matters for management oversight, and (iv) manage the liquidity profile within risk tolerance, The liquidity risk management framework is cascaded to all business lines to ensure a consistent liquidity risk strategy, policies and practices across the Group. Liquidity risk related policies are reviewed by senior management and dedicated committees, and significant changes in such policies are approved by the Boards of the Bank and Public Finance or committees delegated by the respective Boards.

ALCOs of the Bank and Public Finance monitor the liquidity position as part of the ongoing management of assets and liabilities, and set up trigger limits to monitor liquidity risk. They also closely monitor the liquidity of the subsidiaries on a periodic basis to ensure that the liquidity structure of the subsidiaries' assets, liabilities and commitments can meet their funding needs, and that internal liquidity trigger limits are complied with.

Treasury Department of the Bank and a dedicated department of Public Finance are responsible for the centralised implementation of the strategies and policies approved by the dedicated committees and the respective Boards, and developing operational procedures and controls to ensure the compliance with the aforesaid policies and to minimise operational disruptions in case of a liquidity crisis.

RMDs of the Bank and Public Finance are responsible for day-to-day monitoring of liquidity maintenance ratios, loans to deposits ratios, concentration risk related ratios and other liquidity risk related ratios coupled with the use of cash-flow projections, maturity ladder, stress-testing methodologies and other applicable risk assessment tools and metrics to detect early warning signals and identify vulnerabilities to potential liquidity risk on forward-looking basis with the objective of ensuring different types of liquidity risks of the Group are appropriately identified, measured, assessed and reported. They also carry out analysis based on risk-based management reports, summarise the data from those reports and present the key liquidity information of the Group and key business lines to

Public Bank (Hong Kong) Limited

the respective ALCOs on a regular (at least monthly) basis. In case of significant issues, such as serious limit excesses or breaches or early warning signals of potential severe impact on the Bank or Public Finance are identified from the aforesaid management reports or market information obtained from Treasury Department and business units, a designated ALCO member will convene a meeting (involving senior management members) to discuss risk related matters and propose actions to ALCO whenever necessary. A high level summary of the liquidity risk performance of the Bank or Public Finance will be presented by the respective ALCOs to their RMCs and the Boards.

The liquidity risk related metrics of the Bank and Public Finance include at least liquidity maintenance ratios (with internal risk tolerance higher than the statutory liquidity maintenance ratio); cash-flow mismatches under normal and different stress scenarios; concentration related limits of deposits and other funding sources, and maturity profile of major assets and liabilities (including on-balance sheet and off-balance sheet items). The systems and procedures are in place to measure and manage liquidity risk by cash-flow projections in both baseline and stressed scenario arising from off-balance sheet exposures and contingent funding obligations. In baseline scenario, expected cash outflow is derived from the aforesaid exposures and obligations including potential drawdowns of unused committed facilities; trade related contingencies; issued letters of credit and financial guarantee unrelated to trade related contingencies; and uncommitted facilities and other contingent obligations with regard to not only the contractual terms in agreements with customers but also the manner of past months' utilisation and genuine drawdowns of the credit facilities; customer relationships and reputational risk perspectives. In stressed scenario, the utilisation and drawdowns of credit facilities are expected to escalate to some extent.

The funding strategies of the Group are to (i) diversify funding sources for containing liquidity risk exposures; (ii) minimise disruptions due to operational issues such as transfer of liquidity across group entities; (iii) ensure contingency funding is available to the Group; and (iv) maintain sufficient liquidity cushion to meet critical liquidity needs such as loan commitments and deposit withdrawals in stressed situations. For illustration, concentration limits of funding sources such as intra-group funding of not more than 15% of total funding sources, largest funding provider of not more than 10%, wholesale funding of not more than 40%, medium and long term funding of not less than 20% are set to reduce reliance on single source of funding and less stable funding.

Contingency funding plan is formulated to address liquidity needs at different stages including the mechanism for the detection of early warning signals of potential crisis at early stage and obtaining of emergency funding in bank-run scenario at later stage. Designated roles and responsibilities of Crisis Management Team, departments and business units and their emergency contact information are

documented clearly in contingency funding plan policy as part of business continuity planning, and contingency funding measures are in place to set priorities of funding arrangements with counterparties, to set procedures for intraday liquidity risk management and intra-group funding support, to manage media relationship and to communicate with internal and external parties during a liquidity crisis. The stress-testing results are updated and reported to senior management regularly and the results such as survival period for positive cash-flow mismatches are used in contingency funding planning and determination of the required level of liquidity cushion. Based on the results of liquidity stress-testing, standby facilities and liquid assets are maintained to provide liquidity to meet unexpected and material cash outflows in stressed situations.

The Group maintains sufficient liquidity cushion comprising mainly bills, notes or bonds issued by eligible central governments in total amount of not less than HK\$1.5 billion to address critical and emergent liquidity needs on intraday basis and over other different time horizons. The Group is not subject to particular collateral arrangements or requirements in contracts in case there is a credit rating downgrade of entities within the Group.

Apart from cash-flow projections under normal scenario to manage liquidity under different time horizons, different stress scenarios such as institution-specific stress scenario, the general market stress scenario and the combination of such scenarios with assumptions are set and reviewed by dedicated committees and approved by the respective Boards. For instance, under institution-specific stress scenario, loan repayments from some customers are assumed to be delayed. The projected cash inflow would be reduced by the amount of rollover of banking facilities by some corporate customers or reduced by the amount of retail loan delinquencies. Regarding cash-outflow projection, part of undrawn banking facilities are not to be utilised by borrowers or honoured by the Group. The core deposits ratio would decrease as there would be early withdrawals of some fixed deposits before contractual maturity dates or there would be fewer renewals of fixed deposits on the contractual maturity dates. In general market stress scenario, some undrawn banking facilities are not to be honoured upon drawdown as some bank counterparties will not have sufficient liquidity to honour their obligations in market. The Group may pledge or liquidate its liquid assets such as debt securities (including but not limited to treasury bills or notes or bonds issued by eligible central governments) to secure funding to address potential liquidity crisis. Liquidity stress-tests are conducted regularly (at least monthly) and the results are utilised for part of contingency funding plan or for providing insights to management about the latest liquidity position of the Group.

The Group, the Bank and Public Finance are required to comply with the liquidity maintenance ratio requirement and core funding ratio requirement pursuant to section 97H of the Hong Kong Banking Ordinance and Rule 7 and 8D of the Banking (Liquidity) Rules.

	2018
Liquidity Maintenance Ratio	
- The Group	45.4%
- The Bank	44.7%
- Public Finance	56.1%
Core Funding Ratio	
- The Group	133.6%
- The Bank	131.3%

The Group calculates the average liquidity maintenance ratio and core funding ratio of each calendar month by reference to positions of specified days approved by the HKMA pursuant to Rule 48(2) and Rule 76(2) of the Banking (Liquidity) Rules.

The average liquidity maintenance ratio and core funding ratio are computed using the arithmetic mean of each calendar month's average ratio as reported in the return relating to the liquidity position submitted to the HKMA.

Liquidity exposures and funding needs are measured and assessed at the level of individual legal entities (i.e. the Bank and its core operating subsidiaries) and Mainland China Office (i.e. Shenzhen Branch and its sub-branches). Pursuant to the HKMA/ SFC 's requirements, the transferability of liquidity of the Bank and its operating subsidiaries takes into account the need of compliance with trigger points of liquidity related ratios and minimum liquidity capital level; and other legal and regulatory limitations such as limits of connected exposures and capital related ratios. Pursuant to the requirements of China Banking and Insurance Regulatory Commission, the Mainland China Office of the Bank is required to maintain regulatory liquidity ratios in RMB and foreign currencies of not less than 25%. Due to the foreign exchange controls imposed by the State Administration of Foreign Exchange ("SAFE") in China, cross-border funding flow to and from Mainland China is subject to the supervision and approval of SAFE. In view of the limitation on transferability of liquidity, Mainland China Office has maintained high and sufficient liquidity to meet its business needs. As at 31 December 2018, its liquidity ratios in RMB and foreign currencies of Shenzhen Branch were more than 100%.

The table below shows an analysis of financial assets and financial liabilities (including key off-balance sheet items) analysed by principal according to the period that they are expected to be recovered or settled.

	31 December 2018							Total
	Repayable on demand	Up to 1 month	Over 1 month	Over 3 month	Over 1 year	Repayable within an Indefinite period	Over 5 years

Table CRA: General information about credit risk

The Group's business activities are underpinned by its business model and mainly comprise loan business development, investments in held-to-collect debt securities and inter-bank placements without the involvement of complex credit related derivatives, which are major components of the Group's credit risk profile. The business model is reviewed regularly (at least monthly) taking into account factors such as prevailing business and economic conditions, regulatory requirements, credit risk profile and business/ risk appetite, and capital resources to be devoted to support a business activity. In formulating credit risk related policies and setting credit related limits, both regulatory/ statutory requirements (such as section 83 of the Banking Ordinance on connected lending and section 81 of the Banking Ordinance on single largest exposure to a customer group) and risk appetite derived from internal business model are taken into consideration. The risk appetite and underlying credit related limits are reviewed taking into account the interactions among external changes in operating / business conditions, credit profile of customers, and internal changes in business model and strategies. The Group manages its credit risk within a conservative framework and its credit policies, guidelines and risk management processes are regularly reviewed subject to revisions taking into account the aforesaid factors and interactions.

The Group's loan development focuses on secured lending of the Bank and unsecured consumer financing of Public Finance. There were no exposures to PIIGS countries. More than 90% of loan exposures are in Hong Kong. The Group mitigates credit risk by credit protection provided by guarantors and by loan collateral such as customer deposits, properties, listed shares, taxi licences, public light bus licences and vehicles.

RMCs are responsible for setting a credit risk management governance framework, monitoring credit risk independently, and providing recommendations or advice to the Credit Committees and CRMC in managing all credit risk related issues of the Group. Credit Committees of the Group are dedicated to review and amend credit approval criteria and procedures, underwriting standards and credit related limits as appropriate taking into account changes in business strategies, risk appetite, and external environment in which the Group operates. They also monitor the quality of financial assets which are neither past due nor impaired by financial performance indicators (such as the loan-to-value ratio, debts servicing ratio, financial soundness of borrowers and personal guarantees) through meeting discussions and management reports. Loan borrowers subject to legal proceedings, negative comments from other counterparties and rescheduled arrangements are put under watch lists or under the "special mention" grade for management oversight. CRMC is responsible for establishing the framework for identifying, measuring, monitoring and controlling credit risk of the existing and new products. The CRMC reviews credit risk management policies and credit risk tolerable limits, and reports to board-level RMC. CRMC is also dedicated to work out proposals of revised credit limit setting processes/ models and revised credit

Public Bank (Hong Kong) Limited

concentration limits with justifications or derived from the aforesaid processes/ models taking into account stress-testing results arising from limit excesses in particular loan segments. Both Credit Committees and CRMC make recommendations of the above-mentioned revisions of credit related policies, controls and processes after the utilization of internal audit and compliance review results. Exceptions such as material deviations of underwriting standards, breaches of credit related limits and serious financial losses damage to reputation resulting from control lapses will be escalated to RMCs for discussions and further actions as appropriate.

The Group has established policies, procedures, risk profile and management information systems to identify, measure, monitor, control, and report on credit risk. The guidelines for credit risk management have been elaborated in credit risk management policies and loan product manuals of the Group. They incorporate at least delegated lending authorities and limits, credit underwriting criteria, credit monitoring processes, loan classification guidelines, credit recovery procedures and provisioning policies, and are reviewed and updated on an ongoing basis to cater for market changes, statutory requirements and prevailing practices in risk management processes. The Group adopts a “Three Lines of Defence” model for credit risk management. Business units and dedicated departments such as Credit Department and Financial Institutions Department constitute the first line of defence and are responsible for day-to-day identification, assessment, management and reporting of credit risks within their products, activities, processes and systems; ensuring proper reporting of relevant risk exposures on an ongoing basis and any breaches of risk limits and material risk exposures are promptly reported to the head of RMDs and the Senior Management. Heads of RMDs and Compliance Departments of the Group constitute the second line of defence and are the Risk Controllers. The heads of RMDs report to RMCs and work closely with Credit Committees and CRMC to obtain credit risk related information to perform credit risk assessment on loan portfolio and treasury operations independently taking into account at least emerging risk issues and latest market/ regulatory developments. The heads of Compliance Departments also reports to RMCs and are responsible to check against working files and procedures of Credit Department and other involved departments whether they comply with key credit risk management related policies which are formulated in accordance with the guidelines or statutory requirements stipulated by regulators and with risk appetite of the Group. Being the third line of defence, Internal Audit Departments report to Audit Committees which are responsible for providing assurance on the effectiveness of the Group’s risk management framework including credit risk governance. Internal Audit Departments are responsible for reviewing credit risk related policies, controls and processes (e.g. whistle-blowing mechanism) to determine whether they can fulfil the requirements of the regulators and whether they are adequate to minimize and detect credit control lapses such as fraud cases.

Public Bank (Hong Kong) Limited

Supplementary information of credit risk management issues are shown in part "Credit Risk Management" in note 36 of the 2018 Annual Report.

Template CR1: Credit quality of exposures

The table below provides a breakdown of defaulted and non-defaulted loans, debt securities and off-balance sheet exposures as at 31 December 2018. The defaulted loans are individually determined to be impaired after considering the loan overdue more than three months and the qualitative factors such as bankruptcy proceedings, corporate winding-up arrangements and other serious warning signals of repayment ability of counterparties. There were no defaulted debt securities and off-balance sheet exposures as at 31 December 2018.

		31 December 2018			
		(a)	(b)	(c)	(d)
		Gross carrying amounts of		Allowances / impairments	Net values
		Defaulted exposures	Non-defaulted exposures		
		HK\$'000	HK\$'000	HK\$'000	HK\$'000
1	Loans	198,355	29,588,160	192,380	29,594,135
2	Debt securities	0	6,233,042	623	6,232,419
3	Off-balance sheet exposures	0	46,256	102	46,154
4	Total	198,355	35,867,458	193,105	35,872,708

Template CR2: Changes in defaulted loans and debt securities

The table below provides the movement of defaulted loans. During the year of 2018, defaulted loans increased by HK\$63.3 million to HK\$198.4 million. There were no defaulted debt securities as at 31 December 2018 and 31 December 2017 respectively.

		(a)
		Amount
		HK\$'000
1	Defaulted loans and debt securities at end of the previous reporting period (31 Dec 2017)	135,035
2	Loans and debt securities that have defaulted since the last reporting period	419,389
3	Returned to non-defaulted status	(32,435)
4	Amounts written off	(300,262)
5	Other changes*	(23,372)
6	Defaulted loans and debt securities at end of the current reporting period (31 Dec 2018)	198,355

* Other changes include loan repayments

Table CRB: Additional disclosure related to credit quality of exposures

In general, loans and other similar credit exposures with a specific expiry date are treated as overdue where principal or interest remains unpaid as at a reporting date. Loans and other credit exposures repayable by regular instalments shall be treated as overdue when an instalment payment remains unpaid as at a reporting date. Loans or other similar credit exposures repayable on demand shall be treated as overdue where a demand for repayment has been served on the borrower but repayment has not been made in accordance with the instruction of the Group, or the credit exposures have remained continuously outside the approved credit limit already advised to the borrower as at a reporting date.

The Group classifies the loans and advances in accordance with the loan classification system required to be adopted for reporting to the HKMA. "Impaired" means "substandard, doubtful or loss in accordance with loan classification system of the HKMA" taking into account both qualitative factors (such as bankruptcy proceedings) and quantitative factors (for example, past due for more than 90 days) regarding credit quality of exposures. There were no loans which were past due for more than 90 days and non-impaired. After the determination of which assets are impaired taking into account the aforesaid factors, individual impairment shall be computed between a credit exposure and a recoverable amount. The recoverable amount takes into account cashflow from various debts collection means (such as realization of eligible collaterals). Collective impairment is computed for loans which are not subject to individual impairment assessment.

In general, a restructured asset is an asset that has been restructured and renegotiated between the Group and the borrower because of a deterioration in the financial position of the borrower or of the inability of the borrower to meet the original repayment schedule and for which the revised repayment terms, either of interest or of repayment period, are non-commercial to the Group. Such rescheduled asset shall be treated as "impaired" in general. A rescheduled asset may be upgraded from "impaired" to "special mention" if (i) the agreed haircut has been fully written off and all the potential losses have been fully provided upon completion of restructuring; (ii) the Group is satisfied that the borrower will be able to service all future principal and interest payments in accordance with the revised repayment terms. Such asset is however continue to be classified as "rescheduled" until the borrower has serviced all principal and interest payments in accordance with the revised repayment terms continuously for a reasonable period. The reasonable period of continuing repayments for rescheduled assets with monthly payments is 6 months; whilst the reasonable period for other rescheduled assets is a period of continuing repayment of 12 months.

Public Bank (Hong Kong) Limited

Rescheduled assets are no longer regarded as “rescheduled” and are at “pass” grade when their revised repayment terms are, or become, commercial to the institution and where there is reasonable assurance that the borrowers will be able to service all future principal and interest payments on the assets in accordance with the revised repayment terms and the borrowers have serviced all principal and interest payments on the assets in accordance with the revised repayment terms continuously for a reasonable period.

Analysis on credit quality of exposures (including off-balance exposures gross of CCF) that are “neither past due nor impaired”, “past due but not impaired” and “impaired” is provided as follows:

	31 December 2018			
Credit exposures	Loans exposures	Debt securities	Off-balance sheet exposures	Total
	HK\$'000	HK\$'000	HK\$'000	HK\$'000
- neither past due nor impaired	29,141,861	6,233,042	46,256	35,421,159
- past due but not impaired	446,299	0	0	446,299
- impaired	198,355	0	0	198,355
Total	29,786,515	6,233,042	46,256	36,065,813

Of which,

	31 December 2018			
Credit exposures that are neither past due nor impaired	Loans exposures	Debt securities	Off-balance sheet exposures	Total
	HK\$'000	HK\$'000	HK\$'000	HK\$'000
- pass	29,104,995	6,233,042	46,256	35,384,293
- special mention	36,866	0	0	36,866
Total	29,141,861	6,233,042	46,256	35,421,159

Also, the ageing analysis of loans and advances to customers that are past due but not impaired is as follows:

	31 December 2018			
Credit exposures that are past due but not impaired	Loans exposures	Debt securities	Off-balance sheet exposures	Total
	HK\$'000	HK\$'000	HK\$'000	HK\$'000
- overdue 3 months or less	446,299	0	0	446,299
- overdue more than 3 months	0	0	0	0
Total	446,299	0	0	446,299

The quantitative disclosures of exposures by geographical areas, industry and residual maturity are shown in note 35 and supplementary financial information "Advances to customers by industry sectors" of the 2018 Annual Report. The amounts of impaired exposures and related allowances and write-offs; aging analysis of accounting past due exposures and breakdown of restructured exposures are shown in note 17 of the 2018 Annual Report.

Table CRC: Qualitative disclosures related to credit risk mitigation

In evaluating credit risk associated with an individual customer, a customer group or a counterparty, financial strength and repayment ability are always the first considerations in credit review and approval process. Credit risk is mitigated by obtaining recognised collaterals (including cash deposits, marketable securities, properties, taxi licenses and public light bus licenses) and eligible guarantees (such as standby letter of credit issued by a bank of sound financial strength). Meanwhile, recognised netting is not adopted by the Group.

The relevant policies and processes relating to the use of credit risk mitigation are established and approved by Credit Committees and are subject to regular reviews to ensure the effectiveness of credit risk management. The Group monitors the value of the collateral regularly with respect to the nature of collateral and market practice. Marketable securities are marked-to-market on a daily basis whilst valuations on properties, taxi licenses and public light bus licenses are reviewed periodically (i.e. at least monthly).

Template CR3: Overview of recognized credit risk mitigation

The table below provides a breakdown of unsecured and secured exposures (net of impairment allowances), including loans and debt securities as at 31 December 2018. The major collateral for secured loans and advances and receivables were customer deposits, properties, listed shares, taxi licences, public light bus licences and vehicles. All debt securities were unsecured and assigned with a grading of Grade A3 or above based on the credit rating of Moody's Investor Service ("Moody's"), an external credit agency.

		31 December 2018				
		(a)	(b1)	(b)	(d)	(f)
		Exposures unsecured: carrying amount	Exposures to be secured	Exposures secured by recognized collateral	Exposures secured by recognized guarantees	Exposures secured by recognized credit derivative contracts
		HK\$'000	HK\$'000	HK\$'000	HK\$'000	HK\$'000
1	Loans	4,597,539	24,996,494	24,530,598	465,896	0
2	Debt securities	6,532,890	0	0	0	0
3	Total	11,130,429	24,996,494	24,530,598	465,896	0
4	Of which defaulted	64,065	78,354	78,354	0	0

Table CRD: Qualitative disclosures on use of ECAI ratings under STC approach

Credit ratings from Moody's, an external credit agency, are used in the Group for risk-weighting credit risk exposures under the following relevant exposure classes of the Group:

- Sovereign;
- Public sector entity;
- Bank;
- Securities firm; and
- Corporate

Over 90% of bank placements were deposited with banks and financial institutions rated with a grading of Baa2 or above based on the credit rating of Moody's. All issuers of debt securities are either central governments, public sector enterprises or banks with a grading of A3 or above. Over 90% of loan exposures are non-rated. There are no transfers of External Credit Assessment Institutions ("ECAI") issuer ratings to ECAI issue specific ratings onto comparable assets in the banking book.

Template CR4: Credit risk exposures and effects of recognized credit risk mitigation (“CRM”) – for STC approach

The table below shows the effect of any recognized CRM on the calculation of credit risk capital requirements under STC approach with additional information of RWA density showing a synthetic metric on riskiness of each exposure class as at 31 December 2018.

Exposure classes		31 December 2018					
		(a)	(b)	(c)	(d)	(e)	(f)
		Exposures pre-CCF and pre-CRM		Exposures post-CCF and post-CRM		RWA and RWA density

Table CCRA: Qualitative disclosures related to counterparty credit risk (including those arising from clearing through CCPs)

The Group's relevant counterparty credit risk exposures are applicable to interbank placements and nostro balances; certificates of deposit; held-to-maturity bonds and debt securities; commercial exposures (i.e. standby letters of credit (SBLC), bank guarantees, letter of credit confirmations, trade finance lines); and over-the-counter derivative financial instruments (i.e. foreign exchange contracts). Counterparty credit risk management policy is in place to set the scope for the management of all on- and off-balance sheet credit risk exposures with sovereigns and financial institutions undertaken by the Bank and ensure counterparty credit risk management is consistently applied across all entities within the Group.

The Group has adopted the Current Exposure Method for regulatory capital calculation of its counterparty credit risk arising from securities financing transactions and derivative contracts booked in the banking book and trading book.

All transactions with counterparties are to be transacted within approved limits which are put in place to manage pre-settlement and settlement risks. Monitoring of counterparty exposures against respective approved limits for each counterparty is to be conducted on a daily basis. In setting the counterparty limits, actual business needs of the Group based on past months' utilisations; the Group's projected future business needs; credit standing of a counterparty and its related entities; and internal capital set aside for counterparty credit risk exposures are considered. Settlement Risk is managed via settlement via payment-versus-payment channels (where possible) and approved counterparty credit risk limits. The Group also monitors the risk exposure due to fluctuations in the market using the current exposure and the potential exposure value of the transactions. Financial Institutions Department is responsible for the aggregation of the approved limits and outstanding of similar counterparties for all the entities within the Group and to report quarterly to the Credit Committees for review.

The Group is not involved in complex derivative financial instruments (e.g. commodities contracts and equity swap contracts) in general and there are no material counterparty credit risk exposures arising from clearing through CCPs. There are also no other material counterparty credit exposures involving general and specific wrong-way risk and related credit risk mitigation via collateral or guarantee. The Group has adopted the Current Exposure Method for regulatory capital calculation of its counterparty credit risk ("CCR") arising from derivative contracts (i.e. foreign exchange contracts).

Public Bank (Hong Kong) Limited

As at 31 December 2018, the potential value of the additional collateral pertaining to ISDA CSA downgrade thresholds that the Group would need to post with counterparties in the event of a two-notch downgrade was nil. No recognized credit derivative contract was applied as credit risk mitigation, and no valid bilateral netting agreement was made and taken into account in the calculation of regulatory capital.

Template CCR1: Analysis of counterparty default risk exposures (other than those to CCPs) by approaches

The table below provides a breakdown of counterparty default risk exposures (other than those to CCPs), RWAs, and where applicable, main parameters under the approaches used to calculate default risk exposures in respect of derivative contracts as at 31 December 2018. CEM was adopted by the Group for derivative (mainly foreign exchange) contracts. The Group had no SFTs during the reporting period.

		31 December 2018

Table MRA: Qualitative disclosures related to market risk

RMCs is responsible to assist the Board to oversee and monitor market risk exposures and to set out Risk Management Framework for identifying and managing potential risks of the Group. Under such framework, three lines of defence are adopted for market risk management to promote sound risk culture through a clear focus on key market risks associated with the Group's activities and to provide timely and appropriate responses to inappropriate risk-taking behaviour. The first line of defence comprises market risk owners at Treasury Department and business units. They are primarily responsible for the day-to-day market risk management. The second line of defence refers to the RMD. The risk controller of market risk, who is Head of RMD, works closely with ALCOs which are responsible for monitoring and reporting of material market risk issues to the RMCs, conducting regular review of market risk trends and setting out market risk management strategy as appropriate. The third line of defence refers to Internal Audit Departments which are under oversight of Audit Committees.

The Group has formulated risk management policy to identify, measure, monitor, control, and report on market risk exposures. Adequate capital resources are set aside to cover those risk exposures. The risk management policy and control limits regarding market risk governance are approved by the RMC, and are regularly reviewed and updated to align with market changes, statutory requirements, and prevailing practices in market. Risk limits and management action triggers are set with reference to risk appetite of the Bank.

Risk appetite has been defined in accordance with the Group's business strategies and objectives to govern the trading book activities. Currently, our Group is not involved in and does not plan to conduct complex derivative financial contract transactions. Only traditional over-the-counter foreign exchange transactions are conducted at present. Hedging is monitored under market risk management framework.

For measuring and monitoring of market risk exposures, market risk analysis is conducted for all principal currencies with potential loss and impact to capital adequacy. For reporting of market risk, risk reporting for trading book positions is compiled and monitored on a daily basis, and risk reports are prepared for different levels of governances on a regular basis.

Template MR1: Market risk under STM approach

The table below provides information on market risk RWA as at 31 December 2018. The market risk RWA arose from foreign exchange exposures only. Our Group had no gold contract exposures as at 31 December 2018.

		31 December 2018
		(a)
		RWA
		HK\$'000
	Outright product exposures	
1	Interest rate exposures (general and specific risk)	0
2	Equity exposures (general and specific risk)	0

4	Commodity exposures	0
	Option exposures	
5	Simplified approach	0
6	Delta-plus approach	0
7	Other approach	0
8	Securitization exposures	0
9	Total	1,144,050

Table IRRBB: Interest rate exposures in banking book

Interest rate risk is the risk that the Group's position may be adversely affected by a change of market interest rates. The Group's interest rate risk arises primarily from the timing difference in the maturity and the repricing of the Group's interest-bearing assets, liabilities and off-balance sheet commitments. The primary objective of interest rate risk management is to limit the potential adverse effects of interest rate movements in net interest income by closely monitoring the net repricing gap of the Group's assets and liabilities. Interest rate risk is daily managed by the Group's Treasury Department. RMDs of the Bank and Public Finance measure interest rate risk exposures in the banking book on monthly basis and the results are monitored by the respective ALCOs against limits approved by the respective Boards.

Interest rate risk exposures in the banking book:

The relevant interest rate risk arises from repricing risk and basis risk.

Repricing risk is one of the sources of interest rate risk which arises from timing differences in interest rate changes and cash-flows that occur in the repricing and maturity of fixed and floating rate assets, liabilities and off-balance sheet financial instruments. Should the interest rate increase/decrease by 200 basis points and the positive net interest gap be HK\$3,433 million (31 December 2017: HK\$3,102 million) up to 12 months in 2018, profit before tax in 2018 would increase/decrease by HK\$99 million or 1.70% of equity (2017: HK\$91 million or 1.60% of equity). Profit before tax would increase/decrease by HK\$107 million or 1.83% of equity (31 December 2017: HK\$83 million or 1.45% of equity) for the next 12 months after the reporting date.

Based on the positive net interest gap of HK\$6,236 million (31 December 2017: HK\$5,801 million) up to five years, the economic value would increase by HK\$64 million (31 December 2017: HK\$81 million).

Basis risk is one of the sources of interest rate risk which arises from the difference in the changes of interest rates earned and paid on different financial instruments with similar repricing characteristics. The Group adopts two stress-testing scenarios for the sensitivity analysis:

- (i) Interest rates on managed-rate assets would decrease by 200 basis points whilst interest rates on other interest-bearing assets and interest-bearing liabilities would keep unchanged. Based on this scenario assumption, profit before tax would decrease by HK\$367 million or 6.30% of equity (2017: HK\$340 million or 5.95% of equity) for the year ended 31 December 2018. Profit before tax would decrease by HK\$397 million or 6.81% of equity (31 December 2017: HK\$362 million or 6.33% of equity) for the next 12 months after the reporting date.

- (ii) Interest rates on interest-bearing assets and liabilities, except for interest rates on fixed rate assets and managed-rate assets, would increase by 200 basis points. Based on this scenario assumption, profit before tax would decrease by HK\$431 million or 7.39% of equity (2017: HK\$425 million or 7.43% of equity) for the year ended 31 December 2018. Profit before tax would decrease by HK\$450 million or 7.73% of equity (31 December 2017: HK\$451 million or 7.88% of equity) for the next 12 months after the reporting date.

For measurement of the repricing risk and basis risk exposures, the Group slots its interest-sensitive assets and liabilities into different time bands according to the earliest interest repricing dates of such assets and liabilities. The Group does not apply to the HKMA for the use of behavioural maturity, and contractual maturity of interest-sensitive assets and liabilities are used in its interest rate risk assessment. For instance, it is assumed that there are no loan prepayments and the interest rates on non-maturity deposits such as savings and demand deposits can be adjusted on the business day immediately following the reporting date.

Table REMA: Remuneration policy

The Bank has established its Remuneration Committee with written terms of reference in compliance with the requirements of the Supervisory Policy Manual Module CG-5 on “Guideline on a Sound Remuneration System” (the “Remuneration Guideline”) issued by the HKMA. As at 31 December 2018, there were five members in the Remuneration Committee and three of them were Independent Non-Executive Directors. The Remuneration Committee was chaired by Mr. Lai Wan, the Independent Non-Executive Co-Chairman of the Bank. The other members were Tan Sri Dato’ Sri Tay Ah Lek, Mr. Lee Chin Guan, Mr. Tang Wing Chew and Mr. Quah Poh Keat.

The Remuneration Committee meets at least once a year to review and make recommendations to the Board of the Bank on the overall remuneration policy (the “Remuneration Policy”), specific remuneration packages and compensation arrangement relating to the termination or appointment of Executive Directors, Chief Executive, senior management and key personnel, and for the formulation and implementation of the Remuneration Policy applicable to all employees of the Bank and its subsidiaries other than Public Finance and its subsidiaries.

During the year, Directors’ fees, annual salary review, allocation of annual discretionary bonus, annual review of terms of reference of the Remuneration Committee and annual review of the Remuneration Policy and system in compliance with the Remuneration Guideline of the HKMA were reviewed and noted.

Remuneration of the Executive Directors, Chief Executive, senior management and key personnel is determined by reference to factors including the level of workload, responsibilities and commitments, performance and remuneration packages. No individual Director or any of his associates is involved in deciding his own remuneration.

No remuneration was paid to members of the Remuneration Committee for the year 2018 except the Directors’ fees.

The Board of the Bank oversees the formulation, maintenance and implementation of the Remuneration Policy.

The Remuneration Committee of the Bank reviews and recommends the remuneration packages of key senior management personnel of the Group (excluding Public Finance and its subsidiaries which had established their own Remuneration Committee and adopted their own Remuneration Policy) in accordance with the authorities and responsibilities as stipulated in its terms of reference to the Board of the Bank for approval.

Public Bank (Hong Kong) Limited

Remuneration review is submitted to the Board of the Bank by the Remuneration Committee for approval each year.

The Remuneration Committee of the Bank also works closely with the Human Resources Committee, Nomination Committee, Audit Committee, Risk Management Committee and other dedicated committees and departments to (i) review if there are any material non-compliance issues in relation to internal policy and statutory requirements and make adjustments to payments of remuneration whenever necessary, and (ii) decide upon the appraisal system which fairly measures the performance of each key personnel, and make changes to the system when necessary to meet the changing needs of the Bank.

Regular compliance monitoring is imposed to review the management and operation of the remuneration system.

Human Resources Department continues to take initiatives on all human resources matters while Human Resources Committee continues to function in accordance with its terms of reference.

Recommendations related to Heads of Internal Audit Department, Compliance Department and RMD are submitted to the Audit Committee or Risk Management Committee, where applicable, for endorsement. Discussions and recommendations related to other employees at managerial level made in the meetings of Human Resources Committee are submitted to the Group Human Resources Committee of Public Bank Berhad, the ultimate holding company of the Bank, and where appropriate, to the Remuneration Committee of the Bank for endorsement while discussions and decisions related to non-managerial employees made in the meetings are normally noted in the Board Executive Committee of the Bank.

The Bank adopted the Remuneration Policy in compliance with the Remuneration Guideline. The Remuneration Policy covers the Bank (including all branches and representative offices of the Bank) and its subsidiaries which are subject to the HKMA's consolidated supervision except Public Finance, Public Financial Limited and Public Securities Limited (the "Bank Group"), which have their own remuneration policy. The Remuneration Policy was initiated by the Human Resources Committee and approved by the Board. The Human Resources Committee also reviews and keeps abreast of the legal and regulatory requirements from time to time, and liaises with risk control units including risk management, financial management and compliance functions to strike a balance among sufficient staff motivation, sound remuneration packages and prudent risk management. Any findings and recommendations to be incorporated into the Remuneration Policy will be put forth to the Remuneration Committee for

Public Bank (Hong Kong) Limited

consideration. Having discussed and agreed upon at the Remuneration Committee, the revisions to the Remuneration Policy will be recommended to the Board for approval. The Remuneration Policy is subject to an annual review.

The Bank's Remuneration Policy encourages employee behaviour that supports the Bank's risk tolerance, risk management framework and long-term financial soundness. The policy is established and implemented in line with the objectives, business strategies and long-term goals of the Bank and formulated in a way that will not encourage excessive risks taking by employees but allows the Bank to attract and retain employees with relevant skills, knowledge and expertise to discharge their specific functions. The Bank has considered the risks, including market risk, credit risk, liquidity risk and operational risk, when implementing the remuneration measures, which are closely monitored by various management committees and working groups. The Bank considers and reviews the audit reports and various kinds of performance reports to take account of these risks in the remuneration process. Audit reports cover information on asset quality, credit risk management and operational risk management whilst performance reports state various kinds of business performance indicators such as delinquent rate, net impairment ratio, customer deposit, business growth, etc., which are useful for identification of current and future risks. The employees' performances in controlling these current and future risks are linked with their remuneration rewards. The Board will take the overall performance of the Bank Group, risk management, market trends, and other non-financial measures when deciding the performance bonus pool. This will be adjusted as and when the Bank considers appropriate. There is no change of remuneration measures over the past year.

Basically, the remuneration package consists of fixed and variable remuneration which are offered in cash. Fixed remuneration refers to basic salary, the year end double pay, and other fixed income while variable remuneration refers to discretionary bonus, sales commission and other variable income. The remuneration packages are determined by taking into consideration the evaluation of the job's responsibilities and contribution, the market pay levels for benchmark positions, and employee's performance. The level of remuneration and the proportion of variable remuneration to fixed remuneration of senior management and key personnel are linked to their level of responsibility undertaken and contribution to business performance and enhancements of efficiency and effectiveness of operations.

When the amount of variable remuneration payout exceeds a predetermined percentage or amount of the annual fixed remuneration of the employee, a deferment period of 3 years will be imposed in order to align the incentive awards to be granted to an individual employee with the long-term value creation and the time horizons of risk. The deferred remuneration will be vested gradually over the 3-year

Public Bank (Hong Kong) Limited

deferment period and no faster than on a pro-rata basis. To conform to the spirit of the Remuneration Guideline and not to undermine the risk management advantage by applying deferment of variable remuneration, if there is any deferred remuneration, hedging exposures in respect of the unvested portion of deferred remuneration by any trading, investment or other financial activities will be restricted.

Subject to the decision of the Remuneration Committee in accordance with the internal guidelines, the deferred remuneration will be forfeited and/or clawed back when it is later established that the data on which the performance measurement for a particular year was based is subsequently proven to have been manifestly misstated; or it is later established that the employee concerned has committed fraud or other malfeasance, or violated any legislation, code or internal control policies of the Bank Group; or there has been a significant downward restatement of the financial performance of the Bank Group; or the employment of the employee is terminated.

The award of variable remuneration to the senior management, key personnel and risk taking employees is subject to the aforesaid deferral mechanism which will be reviewed by the Remuneration Committee at least annually and subject to change when necessary.

The remuneration of the employees within the risk control function, including those performing risk management, accounts, audit, compliance and credit management functions, etc., is determined by the performance of individual employees and is independent of the business they oversee. The performance factors of the appraisees in carrying out their core job responsibilities under their respective job functions are assessed in the performance appraisals. Appropriate remuneration will be recommended based on the results of the appraisals annually.

The Bank uses a comprehensive performance measurement framework that incorporates both financial and non-financial performance in determining the size and allocation of variable remuneration. The financial metrics link the variable remuneration to the profits, revenue and other performance measures of the Bank as a whole, and the contribution of business units or departments and an individual employee to the Bank as well. The applicable and material risks associated with the activities of employees, the cost and quantity of capital required to support the risks taken, and the cost and quantity of liquidity risk in the conduct of business are also taken into consideration. The non-financial metrics capture the performance on qualitative aspects such as the compliance with risk management policies, adherence to legal, regulatory and ethical standards; customer satisfaction; and effectiveness and efficiency of supporting operations. Given the importance in both financial achievements and non-financial factors, poor performance will result in reduction of or elimination to the variable

Public Bank (Hong Kong) Limited

remuneration. Adverse performance in non-financial factors will override outstanding financial achievement, and thus, the employee's performance can be assessed comprehensively.

An annual review of the remuneration system and the Remuneration Policy of the Bank Group was conducted by the Remuneration Committee at the end of 2018. The review concludes that the remuneration system and the Remuneration Policy are consistent with the principles set out in the Remuneration Guideline.

Template REM1: Remuneration awarded during financial year

The table below provides the quantitative information on remuneration for the Bank's senior management and key personnel for the year ended 31 December 2018, split into fixed and variable remuneration. Senior management comprises Chief Executive, two Alternate Chief Executives, Financial Controller and Head of Treasury. Key personnel comprises (1) individual employees whose duties or activities in the course of employment involve the assumption of material risks or the taking on material exposures on behalf of the Bank Group; (2) the key personnel within risk control functions; and (3) other personnel who plays a pivotal role within the Bank. There is no variable remuneration in shares or share-linked instruments which had been granted for the year ended 31 December 2018.
